Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 6 prior to the second "mechanism" insert --locking--.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 4-6, 10, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Reimann et al.

Reimann et al discloses in figures 1-3 a trigger switch for a power tool including a chassis 11; a trigger 1 mounted to the chassis for movement between an ON and OFF position; an electrical switch (not shown) and a locking mechanism attached to the chassis and being user activated to unlock the trigger in the OFF position and trigger activated to release the trigger in the ON position. The locking mechanism comprises a single locking member formed by the parts 10, 7, 9, 2, and 13 arranged to lock the trigger in both the ON and the OFF positions. The locking member includes locking pin 2 extending through the trigger and the chassis. A

locking plate is formed integral to the trigger and includes a slot 12 through which the pin extends. The locking mechanism includes a spring 13 biasing the locking member to lock the trigger in the OFF position and spring 9 to release the trigger in the ON position. As for the pairs of terminals located in the switch, this is a matter of engineering design choice base on the tool to be operated and the desires of the manufacturer.

Allowable Subject Matter

4. Claims 2, 3, 7-9, and 11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cranmore, Park et al, Sahrbacker, Veske, Piber, Suzuki, and Inuyama teach various locking mechanisms for trigger switches in power tools.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael A. Friedhofer whose telephone number is 571-272-1992. The examiner can normally be reached on Mon-Fri 6:00 - 2:30.
